This news report sums it up nicely I think.

Subject: GenX

Laurence,

It is also worth knowing that the Cape Fear Public Utility Authority has been using their finished drinking water in their groundwater recharge program.

So they have been irrevocably contaminating their groundwater resources with GenX and a slew of other ether PFAS for many years based on the premise that "if it's safe enough to drink, why not pump into the ground too?" What could go wrong?

If ever there was a case against aquifer recharge, this is it. We've been trying to get them to give us groundwater samples for a while now. I'm guessing we're never going to get any samples now.

Have a nice day!

Andy
